Wulong
WOO-long

Wulong WOO-long

Scientific Name: *W. bohaiensis*

Name Origin: "wu" means dancing and "long" means dragon in Chinese.

Discoverer: Described in 2020

Type of Dinosaur: Theropod

Geological Period: Early Cretaceous (Aptian)

Age: 120 Million Years ago

Height: 10-15 centimeters (4-6 inches)

Length: 36-46 centimeters (14-18 inches)

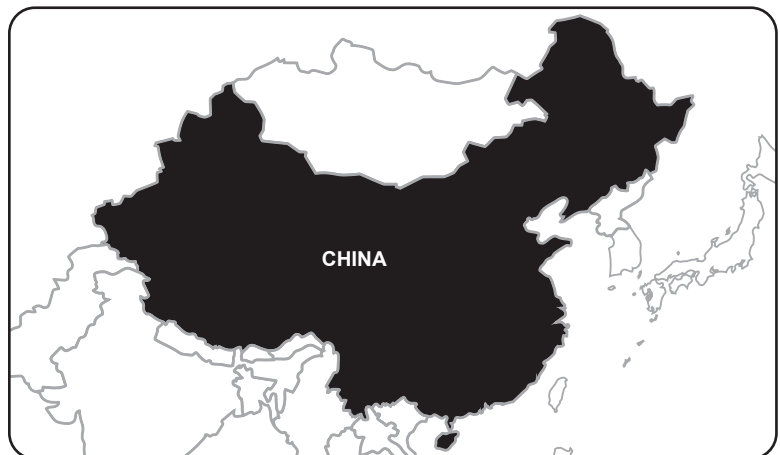

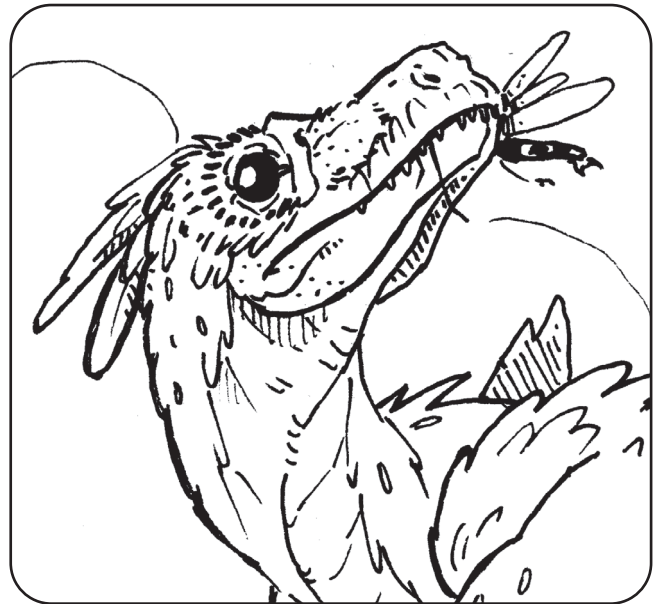

Mass: .45-.90 kilograms (~1-2 pounds)

Diet: Carnivore

Location: China

Fun Facts: The *Wulong* was a small feathered dinosaur, a little larger than a crow. Despite being feathered like a bird, the *Wulong* had very dinosaurian characteristics like a long bony tail, hands with claws, and pointy teeth.

Further Investigation: The *Wulong* belonged to a family of dinosaurs called the dromaeosauridae. Research other dromaeosauridae to learn what traits they have in common.
